BLM GROUP and Salvagnini

announce a commercial partnership agreement

BLM GROUP and Salvagnini are pleased to announce a commercial partnership for the European market.

Founded on mutual respect, this agreement represents a strategic alignment between two organizations with strong manufacturing heritage, international presence, and a relentless commitment to innovation and long-term strategic vision. As manufacturers increasingly seek specialized partners with a focused area of expertise, the alliance brings together two companies with distinct capabilities to offer customers a powerful combination of expertise, advanced solutions, and reliable partnership, ensuring they remain competitive in an ever-evolving marketplace.

BLM GROUP will maintain its strategic focus on tube processing technologies, including tube laser systems, tube bending machines, 3D laser cutting cells, and laser welding systems, further strengthening its international leadership position.

Salvagnini will serve as the reference partner for new business opportunities in 2D laser cutting solutions, leveraging its extensive expertise in sheet metal processing technologies.

The collaboration creates opportunities to develop joint business initiatives in international markets, capitalizing on the companies' global presence and the complementarity of their respective technologies.

BLM GROUP
BLM GROUP presents itself as a global partner for the entire tube working process, with a widespread presence worldwide and with thousands of applications. The companies that are part of the Group are:

- BLM SPA, of Cantù (CO), specialized in the production of tube bending, tube end-forming, wire bending machines and 3D laser cutting cells

- ADIGE SPA of Levico Terme (TN), specialized in the production of laser tube cutting systems (Lasertube), sawing machines for tubes, solids and profiles with brushes and measuring, washing and collection systems
- ADIGE-SYS SPA of Levico Terme (TN), specialized in the production of systems for the laser processing of large tubes and profiles

Salvagnini

Salvagnini designs, manufactures, sells, and services flexible systems for sheet metal processing. Founded in Italy in 1963, the company develops and supplies integrated technologies for cutting, punching, bending, and automation, supporting customers in the evolution of their manufacturing processes through highly customized solutions. Salvagnini's offering combines mechanical, electronic, and software expertise to create intelligent and automated systems capable of improving productivity, efficiency, and sustainability. With an extensive network of sister companies and partners in major international markets, the Group supports manufacturing companies worldwide through an approach focused on innovation, customer proximity, and a long-term vision.
